Description

Acceptance criteria: For this task, the criteria is going to be **automation of blink url (vanity url) generation if there is a link provided in the title of any google document.**

For example: If a person creates document from data team with title "Report Q3 (<https://data.jerseystem.org/report-q3>)" it should automatically generate a blink url that redirects to the actual document url.

Email from Nabil:

Client: @Bianca Dyer

DATA: @Tara Merry

Automation: @Marcel Blonk

Over the years, we have promoted crowdsourcing of the production of Document to be shared - by all volunteers for the purpose of documentation, training, knowledge sharing, etc...

But because Most of our documents produced are Google Documents, we started using vanity URL to reference them. BLink is the platform assigning a "fancy URL" (<https://data.jerseystem.org/HUCA.ATS>) to an Ugly URL

(https://lookerstudio.google.com/reporting/8e78dc07-46d6-4b82-b24d-7fbbdec82d0e/page/p_8mw04caosd)

The promise is simple:

- 1) Create a Document in Google Workspace
- 2) include a properly formed http address in the name of thf the doc
- 3) It will be reachable through that URL.

@Bianca Dyer: This is an TECH.ACE future of work, making us effective.

@Tara Merry: This is not for a particular business unit, so you are the designated this is the legacy query. Still good but needs a new home.

(Select Title, Open_link,

REGEXP_SUBSTR(title, @validurl) AS extracted_url,

SUBSTRING_INDEX(SUBSTRING_INDEX(SUBSTRING_INDEX(REGEXP_SUBSTR(Title, 'https?://[^/]+'), '://', -1), '.', 2), '.', 1) AS subdomain

from GAT_ETL.Drive_Files

where Title REGEXP 'https?://[a-zA-Z0-9.-]+'

[a-zA-Z]

{2,}

((^[^s]*)?),

validBlinkDomains as (select distinct domain_name from BLINK.vanity_urls)

Select subdomain, extracted_url,

Open_Link as URL from allvalidurls a

inner join validBlinkDomains v on a.subdomain=v.domain_name

@Marcel Blonk now that you know all about blink, I let you partnet with @Tara Merry

Hi Marcel,
Is this request to create a table in MySQL that will pull this data or a query that will be able to pull this data?

Thanks – [Marcel Blonk](#) I don't fully understand the background on this one yet

 [Bianca Dyer \(Inactive\)](#) added a comment - 08/Feb/26 10:57 AM

[Lee Ivy](#) for awareness. I think it's best for BORD.DOT to align on this; decision might be to cancel. Nabil and Marcel have context

 [Bianca Dyer \(Inactive\)](#) added a comment - 13/Jan/26 8:49 PM

No objections from me. [Nabil Mouline](#) Do you have any objections?

 [Marcel Blonk](#) added a comment - 12/Jan/26 3:13 PM

The data is just not clean enough for this to happen as asked. urls in the title are too common and random.
eg.the example HUCA.ATS gives us 5 different hits for 5 different docs:

1. HUCA.ATS Reports (<https://data.jerseystem.org/huca.ats>)_Anomaly Persons_Table
2. <https://welcome.jerseystem.org/huca.ats>
3. HUCA_1852_ATS_Reports_(<https://data.jerseystem.org/huca.ats>).pdf
4. <https://welcome.jerseystem.org/huca.ats>

5. HUCA_1852_ATS_Reports_(<https://data.jerseystem.org/huca.ats>)

Other examples are pretty clear that the url is not meant to be an alias

I suggest we change it to require an explicit label (eg. "alias:<https://data.jerseystem.org/huca.ats>") and only if that pattern is found will we use it. If there are multiple, we will use the most recent updated document as the target of the alias.

Any objections to this?

▼ Marcel Blonk added a comment - 17/Dec/25 8:34 AM

[Bianca Dyer Nabil Mouline](#) the data here is inconsistent. We have 29 out of 193 where there are multiple titles with the same vanity url (eg '<https://data.jerseystem.org/huca.int>' shows up 19 times). There are also some 100 instances where there is already a vanity url, but it points to a totally different document. (eg. data.jerseystem.org/HUCA.ONB would be pointing to <http://drive.google.com/open?id=1HwmpOfblVjC3h90jMmplqoWdPGTs8svRXpH3DdURFNE>, but currently points to <https://lookerstudio.google.com/u/0/reporting/80d4269e-101d-4a4b-aa75-bab734fea721/page/VJNdD>).

How do we resolve these? Just overwrite the current vanity url with our best guess (the most recent doc with a particular vanity url)? Don't overwrite existing vanity urls (but then we would never update one, once we found it somewhere)? Have someone clean up the data first (but who would really do that?)

I see the status is now Ready, indicating refinement is complete and the work is ready for development. [Anup Sindagi](#) [Marcel Blonk](#) [Jeel Kanzaria](#) Am I still the client here? If I am, please help me understand the acceptance criteria before development starts
